

A step further in protecting your products...and your profits!

When you need strength

Standard Grip Sheet tie sheets are available in basic paper weights from 60g/m² to 300g/m². In some applications, this just isn't enough. ENDUPACK offers the Grip Pad for the most demanding applications.

Lightweight empty plastic bottles in plastic bags are being stacked 8 layers per pallets and 2 pallets high using Grip Pad for internal storage.

For years, Grip Pad has, and is still being re-used in this application

Heavy water bottles are stacked on a pallet using a thick chipboard Grip Pad

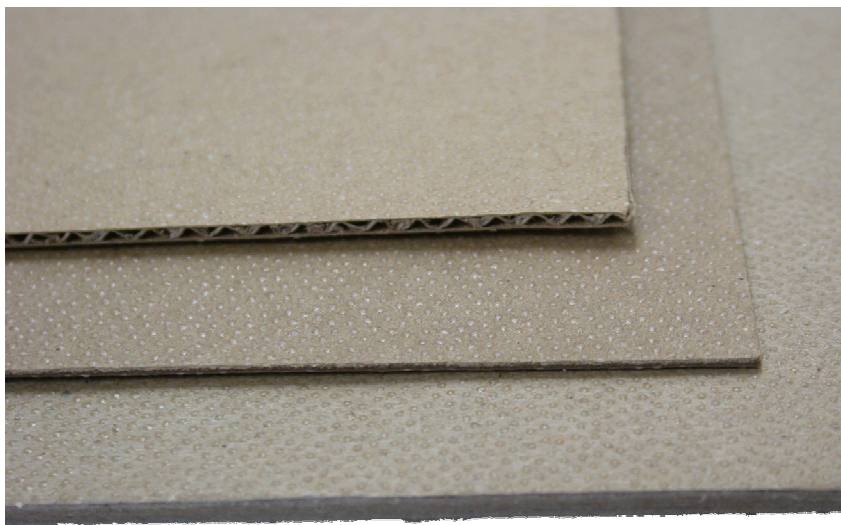

Heavy weight rolls are being shipped on pallets doubled stacked using a Grip Pad between the two pallets

Grip Pad *is available in e-flute and chipboard construction*

Grip Pad is re-usable and recyclable

Grip Pad

Top

*e-flute corrugated board
0.075" (2 mm) thick*

Middle

Chipboard
0.05" (1,3 mm) thick*

Bottom

Chipboard
0.160" (4 mm) thick*

Specifications
